Hey guys, I'm messing around with my new hud using Deathlink's shaders.dll, but for some reason my bulletcount/clipcount and weapon names don't show up. How can I fix this?

I even removed the boxes to see if it might be a problem with the alpha channels, but still it didn't show up.

Also, is there a way to make round radar images, cause I couldn't get it to work.

Please help.

Hud.ini file and screenshot included.

Does anybody know what's causing this?

weapon enabled needs to be false "WeaponEnabled=false"

bullet and clip count aren't showing because of the color counts.

BulletColorCount=4 ClipColorCount=4

try messing around with your colors or just remove those 2 lines.

Also, is there a way to make round radar images, cause I couldn't get it to work.

you will have to code it so that the radar image renders round. You might be able to do it with a alpha image overlay or something.

Thanks everything works now, except for the radar.
