Is there any safe (and if possible simple) program to run Red Alert or the C&C Dawn on for windows 7.

edit: no program is even required refer to the final reply is this post to find the answer

Im not sure I understand? Can't you just run it as admin and have xp/2000 compatibility?

What also works in some older games if compatibility isn't enough is the following:

1. Open taskmanager
  2. Close 'explorer.exe' process
  3. Run game
  4. ...
  5. Profit!
-

No

What do you mean No?

Can you explain a little better please.

No

What do you mean No?

Can you explain a little better please.  
IMO it's pretty clear;  
Running in compatibility mode and as admin does not work.

Probably the same as without compatibility mode. Same happened to me with WWP. (which I solved using my steps above)

EDIT: You can put those steps in a batch-file to automate the process

Caveman wrote on Wed, 13 October 2010 06:14l gathered that much... Why not, what happens?  
Error Code? etc...  
first it says  
,

then it says "cannot locate SETUP.EXE" in a second error message  
im trying the close explorer thing now

The program or feature "\\??\\E:\\setup95\\SETUP.EXE" cannot start or run due to incompatibity with 64-bit versions of Windows. Please contact the software vendor to ask if a 64-bit Windows compatible version is available.

OK

Ah you have 64-bit.

Then it's obvious it won't work. 64-bit windows versions do no longer support 16-bit applications, which Tiberian Dawn & Red Alert 1 are

That also means my solution won't work as this doesn't change anything about that.

The only way to play it now is to run it in an virtualized (or dual-boot) 32-bit environment. (or 16-bit ofcourse )

As stated before, If you're using any 64bit OS you will not beable to run a 16bit program.

See Omar007,

It wasn't just it no doesn't work so, I think I had a right to say What you mean no.

What version of dawn and RA1 are you running? EA released free versions of these games compatible with newer computers. Are you using those?

If that doesn't help you, you'll need to either run an older windows 32 bit version as virtual machine, or use dosbox. D fend reloaded (<http://dfendreloaded.sourceforge.net/>) works great, but it's not very easy to master, IMO. I run D fend with win 3.11 and play my 16-bit games on there .

What I don't think anybody else noticed is that only the setup files are 16-bit. I've had that problem with many old programs. The actual games, however, are - you guessed it - 32-bit (excepting the one that is actually specified as DOS of course). If you can get the game installed, then you'll be able to run it. But you'll have to figure that one out on your own, because I never could get around that.

I figured a way to install it but the issue now is.  
RA95.EXE - Entry Point Not Found  
"the procedure entry point SMapLS\_IP\_EBP\_12 could not be located in the dynamic link library KERNEL32.dll."

Problem solved with red alert:  
to get this to work simply use these instructions  
and use the Red Alert Setup Manager v0.98 tool.

also your going to need to use C&C gold XP patch  
run the game in compatibility mode for 98/me and it should work fine

the freeware version is required

edit:

Tiberian Dawn solved as well:  
this is even more simple

just download and use this  
Then use the C&C gold XP patch

and lastly if you are using windows 7 64 bit you MUST have these EXACT settings in compatibility mode or the game will keep kicking back to the desktop.

edit 2: if your having inverted color problems just have the screen resolution page in control panel open in the background
