Hallo there.. I am new to this board, so if this is not the right place to put this topic please move it...

I have just reinstalled renegade after not playing it for years, after I had completed compain I thought I would join multiplayer, so I clicked new account under multiplayer and here my problems started...

As you properly know that is no longer possible, so I googled and found this board, here I followed another topic about the same subject (http://www.renegadeforums.com/index.php?t=msg&th=36878&start=0&rid=2 5671) saying I need to patch my game and sign up to a board called strike-team.net and register my serial there... I did and when I tried to login this error came up:

When I clicked ok I got to the server list but it was empty.. Is it still possible to play renegade online, and what have I done wrong?

Thank you very much for your time...

Okay turned out I have written the serial the wrong place

So now I can log on without the error coming up, but there still no servers?

I solved the problem.. Just had to reinstall Renegade, and install it at c:\Program files\Renegade instead of the default c:\westwood\Renegade... Then all the patches worked and I can once again play online

Thank you very much everyone for the help.. I could not have done it without this board...
