Alright, first my computer info

Laptop: Asus N-series, N71jq

Ram: 4gb

OS: Windows 7 Premium 64bit

CPU: Intel Core i7 1.60hz

USB: 1 USB3, a few USB2's

HDMI output

Now then, I need a way to record stuff from not only my computer, but my 360 as well. Preferably in a decent definition. The last capture card I tried was from Radio Shack and connected by USB2 and had a "red white yellow" input. It SUCKED. Is there a better way to go about this? Any advice is appreciated.

Right, the 360 has an hdmi output, component output, and that fugly yellow coax if that's the best that can be done. Also, being a laptop, I can't just crack it open and start sticking in cards. It would have to be something external.
