Hello all. After many years i decided to play Renegade again but i have so many issues. I installed the game last night and i tried retrieving servers but i never allowed me to. Nothing comes up on the Advanced Game Listings page. I have also tried booting renegade from GSA but still GSA cannot recognise my copy of Renegade when i scanned my PC. Does anyone have any solutions to my problem. Also im using Windows 7 could that trigger something im not to sure. I have currently uninstalled and waiting for expert solution

Thanks
G0ob

You want this forum: http://www.renegadeforums.com/index.php?t=thread&frm_id=7&rid=24615
A mod will probably move this thread to there.
Check the sticky threads in that forum

I'd recommend you to first reinstall following this sticky.

Then check this sticky on how to register a nickname

I get around 200 ping with my connection in the UK.
afaik there arn't any ways to significantly reduce ping, and there arn't any UK based servers anymore (which would give you ~100 ping)
