Hello,

I've downloaded some new weapons from different forums.

I've placed them ingame as new weapons, but I have a problem.

The weapons look really good, but when you go to first person view, the guy will allways hold it like a handgun...

I've made some pictures of it. Don't mind the giant orange lines inside the pictures.. I've used a demo program silly me.

Problem 2: I have used weapons which have a reload animation in W3Dviewer, but the reload animation won't work ingame.

9) [Hand Positions.png](#), downloaded 651 times

Each weapon has it's own new Ammo and explosions.

Even if I don't set the style to "handgun", he stills hold it like one....

You need to edit the f_gm models to fix the issue your seeing here.

The laser and rocketlauncher where rigged as skin replacements you need to make new animations or either convert westwoods animations for the new gunmodel.
(usually hexediting is the easiest)

I've been trying to follow this tutorial:

<http://www.pokemonca.net/rh/index.php?mod=Tutorials&action=view&id=53>

But all the files are in W3D format. I have found all the f_gm files, but RenX won't open them. So I won't get further then the first step..

I will try to convert the westwood animations once I have the first person model work correctly.

cAmpa wrote on Sat, 01 January 2011 11:06What game do you play?

At the moment, none. I don't have that much time.. most of the time I am at my girlfriend, and if I have time I am making new Coop/vs Multiplayer Maps for Renegade

But I am not experienced with making new weapons and vehicles at all. Normally I am busy with making Botmaps which don't lag at all (because they do if you add many the wrong way..) and making plans for Reborn maps and stuff. So this is totally new for me.

You need to get W3D Importer.
