Hello,

i have a little Problem starting my Brenbot.
I upgraded today from Windows Server 2003 to 2008.

Now when i try to start brenbot, the window popus and closes after that directly.
I tried to click the .bat file and tried to move it into the cmd.exe but for some reason that doesnt work on the Windows Server 2008 :/ I dont know whats the problem.
So i cant open it in the cmd.exe to see what error it give out.

Any ideas how i could fix that problem?

,
crysis992

Start->Run
Then type 'cmd' (no quotes) and enter.

In the black window it'll say something like
C:\Users\YOURUSERNAME>

Type the location off brenbot.exe including brenbot.exe
So you'll get something like this:
C:\Users\YOURUSERNAME>X:\BrenBotInstallDir\brenbot.exe

If your path contains spaces, you might need to put the path between quotes, making it look something like this:
C:\Users\YOURUSERNAME>"X:\Spaced BrenBot Install Dir\brenbot.exe"

Press enter again and it should fire up BRenBot in the CMD window

---

I use batch files to start brenbot so if crashes i will see the error.

```
@echo off
cd C:\Westwood\RenegadeFDS\BRenBot\
brenbot.exe

IF %ERRORLEVEL% NEQ 0 GOTO END

:END
echo.
echo Errorlevel Number %ERRORLEVEL%
echo.
pause
exit
```

Undefined subroutine &Test::fuckyourmon called at plugins/Test.pm line 42.

Errorlevel Number -1

Press any key to continue . . .
