---

I have the sold out software version of renegade, and I attempted to follow the instructions I found on here to install it onto my new laptop.. but I can't. When I put the CD in to install, the auto play comes up, and tells me there is an error and cannot install because of macromedia shockwave player. What am I doing wrong?

I have a windows 7 home premium 64 bit laptop..

edit: problem solved. If I knew how to delete this post I would
