Like the title says. I'm curious. Got an original installation disk in front of me right now and I'm eager to play again since years.

Can anyone tell me what I need to play Renegade and it's multiplayer?

I'm running on Windows 7 (x64).
Thanks.

Well, it is kind of hard to say.
I got laptop with:
32bit Win 7
Athlon II Dual-Core M300
3GB DDR2 RAM
ATI Mobility Radeon 4100

But when playing this game online, even on pretty low video settings I can barely get above 30FPS.

The XWIS login/registration part is outdated (the procedure was changed early this year), this SHOULD be the current process:
http://www.renegadewiki.com/index.php?title=Registering_a_nick_on_XWIS&oldid =29855

Give a shout if that doesn't work. You can also join servers via the GSA list using RenList, which you can download from http://www.mediafire.com/download.php?jr4qu4umab4tq6s (joining XWIS/WOL servers via RenList is broken)

I works with the tutorial provided earlier.
You killed me couple of times already haha

Didn't see your nick. :/

Did you register your serial with XWIS before?

Ingame I play with Lemonaids.

I have no clue. My old login works but it won't show servers.

Hmm it's probably XWIS being extremely terrible/shitty. I have that happening to me too time from time. What fixes it for me is returning to the Renegade main menu and trying again a few times. If I stay for more than 20 seconds in the WOL lobby I get disconnected. :/

When was the last time you played on Lemonaids?

IIRC if an account isnt used after a while, it gets deleted. I may be wrong here.

I may be wrong here but I remember the nickname "lemonaids" and it was a massive cheater I think.

Could be a different spelling but yeah it rings a bell :/

edit* upon googling I get videos of an old cheater tmjam lol...

8 gb ram
quad core processor @ 3.2 ghz
200gb of hard drive space

and 1 bad ass attitude
