Has anyone got Eyefinity working for Renegade, APB or Reborn?

I can start Renegade in that resolution but I get a black screen, audio works and I can move around in the menus but can't see anything. Config.exe reports that resolution set too.

I saw a topic in Widescreenforums with someone saying they got it working, but they didn't report what they did.

Also, on a other note, I almost forgot my password here, lol

Nevermind, got it working, first time must had been a bug.

Looks crap through, it only works in Window Mode.

Welcome to Renegade widescreen
4.0 should fix that (right?)

PS. Put the img in a spoiler pls D:

It looks like it's supposed to look, 4:3

Think so.

Now if IronWarrior could borrow me his Eyefinity setup, I could test that for him

That's nuts.
Does it look better like that on your screen? I have no experience with widescreen but all of the shots I've seen of it look kind of ridiculous.

I've had no such luck getting it to work, doubtful that it ever will. Even if TT releases with widescreen support, unsure whether it'll support a bigger FOV than typical 16:9.

TBH what I do is play windowed mode or do 800x600 in single screen. My monitors have a 4:3 button that makes it look decent.

Well, actually TT adjusts itself to the screen, although i'm not sure what it does with the FOV.

I figured renegade was too old to even have much in the way of FOV adjustment.
