i readed the FaQ looked at the solution and it says to look in the hsot file and here it is:

Copyright (c) 1993-2006 Microsoft Corp.
#
This is a sample HOSTS file used by Microsoft TCP/IP for Windows.
#
This file contains the mappings of IP addresses to host names. Each
entry should be kept on an individual line. The IP address should
be placed in the first column followed by the corresponding host name.
The IP address and the host name should be separated by at least one
space.
#
Additionally, comments (such as these) may be inserted on individual
lines or following the machine name denoted by a '#' symbol.
#
For example:
#
102.54.94.97   rhino.acme.com   # source server
38.25.63.10   x.acme.com   # x client host

127.0.0.1   localhost
::1   localhost

as you can see there IS a extra line under 127.0.0.1 LOCALHOSTS.

i hope you could help me with this problem as i can no longer play renegade.

Try using this server browser application:

http://www.mediafire.com/?jr4qu4umab4tq6s

Configure the GSA stuff and join a server via the GSA tab, joining servers listed in the "WOL" tab
doesn't work correctly, but GSA does.

If you want to play via WOL/XWIS, take a look at this tutorial:

http://www.renegadewiki.com/index.php/Registering_a_nick_on_XWIS
