Whitedragonallow nick

And if that doesn't work, just go in to your ban list in your FDS and delete the name.

I don't know much about the issue, but I've seen it happen that servers will have errors where people will be banned who weren't actually banned. It happened to me on my own clan's server; I logged in and allowed myself back in, but no dice. According to the server manager, he encountered a runtime error and had to reboot the server to put things straight. Does that sound familiar to anyone? It would be nice to avoid errors like this one...
