things like the very good looking water (first TT teaser) and such, are those for the final version only?

---

---

The water shader was dropped from 4.0 because of the need to, ya know, actually RELEASE something

Why not include it as Saberhawk had it written already?

---

---

Because the water shader as shown in the previews was not complete.

will it be in the final or maybe 4.1 ?

because from my point of view it would be the only visible thing what brings some feeling of a modern game...

Spyder wrote on Mon, 19 September 2011 04:44Why not include it as Saberhawk had it written already?

It wasn't finished. It could only work on one map at a time (ever) and couldn't be cleanly turned off (which would break the game completely on older computers.)

i don't mind, it's just water

---

sure the water and the fire look neat but that's just it - they look neat  
go look at the pretty water and fire while i kill your base, that's fine with me

It actually works with all point emitters, not just fire.

it would give renegade abit of renewal, which IMO it needs after this many years of the same  
things over and over again

not that it would make a difference in the outcome or anything, but hey

i mean justg imagine you could at first use it very good for the APB Gap Generator. Instead of this  
blue rotating shit, having this Reflective thing maybe without the water effect. so the enemy cant  
look through but sees himself on a mirror

I disagree.

I'll match your disagreement and raise the ante with a compiled shader package to be used with scripts 4.0 builds dated 20111106 and newer.

kamuixmod wrote on Mon, 07 November 2011 10:36i mean justg imagine you could at first use it very good for the APB Gap Generator. Instead of this blue rotating shit, having this Reflective thing maybe without the water effect. so the enemy cant look through but sees himself on a mirror

Unlikely. Having plane reflections (ie a lake) reflecting everything is one thing, but having an arbitrary shape (like the gap bubble) reflecting everything is another. If it can't be done in UDK, it certainly can't be done in Renegade.

kamuixmod wrote on Tue, 08 November 2011 04:46oh ok. and whats this particle shader.zip thing?

It's the shader that goes with my screenshot hidden earlier in this thread. It doesn't work with the currently released TT versions, but will with the next and can be considered done.

saberhawk wrote on Tue, 08 November 2011 17:17It doesn't work with the currently released TT versions, but will with the next and can be considered done.

But I think that once beta3 is released, putting it in data will be the way to get it.

Ah shame to hear that your shaders has limits that can't be overcome

What about light rays like in this:

<http://www.youtube.com/watch?v=QqOeO3WJVos>

I mean if Oblivion Engine (lol) can do it with little plugins you'd think we could as well?

What if TT included the firstperson weaponmodels as thirdperson models and backmodels?

I think Blacky has already made them so it wouldn't be hard to implement them.

Don't think the first person models have LOD, and often used more draw calls. Last thing you want to do is make the base game have higher requirements right?

but what would happen if u did as reaver11 said?  
the quality or so wouldnt change, would it? its the same weapon anyway or?

---

As far as I know those firstperson weapons indeed don't have LOD setup.  
So given that it indeed might mean an increase of polys by 2k per char(Including the backmodel ofcourse)

This would change polycounts and shaders wouldn't so I see what you mean here.

Just thinking this might have been a way to increase the look of some models (Some 3rd person models look a bit ugly)

it would be cool to be able to use model replacements files whit out everything else geting back to the crapy low LOD models because of that, is it posible to include this as a feature in TT in order to achive this? or it would be too much work tho whorth it? just curious cause i dont think anyone runs renegade whit the low performance setings this days.

Is this "Particle Shader" going to be officially distributed with TT soon? Also, will we EVER see that water shader ever again?
