You need someone to crouch, your supposed to be able to jump on them and then over the wall.... Its hard to do it when its laggy.

Anyone ever try expanding on that by creating a sort of stairs of people? IE: X XX XXX
XXXXXXXXXXWhere every X is a person? Think of the possibilities for Beaconing by doing this,
course it we be very hard to get enough people to do it. [September 02, 2002, 19:32:

god u newbs su dont do anything like that at all. Waht u do is, u need 2 guys, u get at the wall
behidn the gdi ref, then jump at each other, not one person crouhc and the other jumps on top, u
cant do that if ure lucky both of u will land on top of the wall and u can go behind the ref. usually
only one person makes it and u can get into the back entrance from there.

huh i tried jumping over the wall by standing on somebody but it didn't work. the only way i know is
that one players keeps on jumping against the wall and another player jumps against you from
behind like he bumps you over the wall. that works for me [September 13, 2002, 06:21: Message

One GDI player can do the same thing, get into the Nod Ref by jumping onto that wall...

Which wall? the one on the gdi base or the one in the nod base... cuz you can get over the wall with one person on the nod base...but you need someone to crouch on the gdi base..
