4.0 tried it for a couple of days and when all you want is a quik game turns into a file hunt

ok didnt mind that much when it kicks me for skins

then it kicks me for maps city2-flying

now for another file I can not find some w3d file ?

constant connection loss half way throu maps or server crash .

now it will not start at all says memmory manager.dll is missing

and to be totaly honest my lag and warping is worst than ever .

may give it another try in a couple of months but for now it has to go .

no cheats dude .

haveing loads of problems .

and as I said just want to click on game and have a game with in seconds.. not have to hunt down skins or map files

it did seem ok at the start then each map gives a new message remove this or download this and then not start at all memmory manager missing . now something is turning my real time scanning off lol

MDK@ENGLAND@ wrote on Fri, 23 September 2011 20:07not have to hunt down skins or map files

You don't have to install any maps or skins, you just have to UNinstall your cheating skins. Open command prompt, navigate to Renegade data folder, run the following;

```
del *.tga  
del *.dds
```

Voila, problem solved.

rofl you guys are just more yes men .I report problems and you start with the lies without any proof yet again .

ok people say I ddoser wheres your proof  
you say I cheat wheres your proof

the fact is since 4.0 forced the player numbers have fallen hardly 10 to 15 players most maps.  
proof this is wrong

most days between all servers is at most 50 players jelly used to have that many alone ?

you want the hard truth this update 100% sux. soil my name with rumors of cheats and ddossing all you wish but the fact is it sux.

it will kick you for any little map or skin or file it do,s not like.

then cause loads of problems with in the pc.

since installing my real time virus protection is down -now fixed- loads of crashes du to game and restart needed- and as for uninstalling the tt-4.0 this file imbeds its self all over your pc. and is realy hard to remove all..the auto map downloader alone do.s not only download maps as the file size is to large there is a rat or logger in there.

you noob trolls forced me to speak the truth this is a bad file that will be downloaded by almost 400 players and it is not good .

the best way in the world to spread spy ware and no doubt my post will be removed.. so copy and paste this info guys it is bad

my computer has run fine for two years now without fault and since installing this, all is going wrong.

MDK - When it downloads something it tells you... What you're experiencing is modded map from st0rm. Because the version of (add map here) doesn't match the version st0rm has it downloads their version. It's not a big deal I had to do it because of the extra sounds.

You have original map files but the server doesn't.. That's the server's fault not you. Either download the new maps (automatically or play elsewhere).

dude my point was I have all the maps uber map pack but it says it do,s not like them for some reason.

so upon starting a game I have to drop back out find the right map upload install then re join .????????????

and all this for what to stop cheats ? with in amonth they will have cracked it to stop loag my game is all lag and crash and disconnect

not to mention the new maps they have in rotation sux cairo-mutation redux-terrace they was the 3 main maps to kill reneagde community server years AGO

like I said it is new and buggy so I may retry in 3 months or so but untill then it is not ready to force on players

[View Forum Message](#) <> [Reply to Message](#)

As I said... This is due to the SERVER. Your maps are default which is what TT checks for.. Because st0rm or <add server here) use a slightly modded version of said map it downloads ir again. Its the only way to stop people cheating,

This isnt your fault its the servers because they haven't allowed your specific type of map/skin/model.

TT/4.0 isnt forced (yet) however you (yourself) are forced to use it because people have complained of cheats and by you running 4.0 it proves you dont.

So either;

- 1) play with 4.0 and join a server doesn't kick you for invalid (add map/skin/model) here)
- 2) join a older server and have people ban you/kick you etc for cheats and whatnot.

no chats have ever been detected on me and would love to see real proof of this to this day . as I keep asking

back to topic

at least with 3.44 I could join a game and paly the full map all be it by ban evadeing . but still I

could play and that has always been my goal just to play .

but since 4.0 it has been a endless game of find and delete the file or upload a new one .

we had none of this with rr and 3.44 we installed it that was it play a game no ocnstant need to change things

subject over dude I have have had uninstall all renegade and 4.0 ect and a new install will be needed to toaly rid me of 4.0 tt

and that alone will take a hour or two and all just to play a game for 15 mins lol . al was fine untill I was talked in to use this program

sure people will find for them self how it will not improve their game .

fine if its good for you and no problems then I am happy for you but it did not work out for me .

yes I could play storm again with it but to be honest dislike all the fan maps and am happy with good old maps field-under-snow also ect.

but with the slow starting games and haveing to upload or remove files all the time was doing my head in then with the memmory manger problem I just gave up on it.

ok guys I know its new and in time may all be debugged and work fine so untill that time I may use it again .

yes I understand that its beta noob . but why is it being forced on players to play servers they have played for years.

give them the choice to use it or not .

have a 4.0 server and a standard server maybe let peeps decide what they like.

Yeah, and apparently it has Trojans and shit, I still want to see proof of it infecting your system, "n00b".

As well as maybe some crash log files, screen shots etc, of which you have yet to submit.

I could see you getting !forced in a 'half 4.0 server' if that idea ever gets implemented...

Thats a good idea... remind me sometime and I will put it into the next BRenBot release... a !force\_tt command perhaps. To be honest, I would add it just so all the servers can keep this MDK muppet out.

As I was scrolling down and read that post, I knew someone was gonna fix it... If not I was going to, lol.

Edit: Also to MDK I thought the only server you were allowed to play in was st0rm's 4.0 server so they knew you were not cheating... so without 4.0 kiss your Renegade goodbye. Which I am sure most people won't really be bothered by your absence.

Simple terms, STFU and/or GTFO.

In fairness with servers being able to set specifically what they will and wont allow then it could be quite annoying if you have a heavily modded renegade.

Not all files that people use are cheats and going between servers would mean constantly going in to your data folder to remove files that one server wont allow but others will.

This isnt a problem though if you play stock renegade essentially but may have some effect on the few who dont.

Yeah, problem is that I don't think there's a solution other than allow cheats... :\ Loading different files on different servers is apparently more involved than I initially thought. (According to jonwil, it's not my area of expertise.)

Im not too fussed the servers I play on (on the odd occasion I actually play), allow the things I have.

But if the majority of the most common legal skins out there were allowed for most servers then that would be better imo.

St0rm comes across quite like "Renguard pure mode" to me...doesnt like the stealth effect ive got or the hud I have either.

O well...

Show people how to make simple batch files to move the files in/out(or even rename the westwood folder) for those who join multiple servers and hate getting their "cheat files" blocked. I'm not sure on all the commands, but I know this works for me when I change my sniper ret's around(lazy).

Open notepad, put in what you want, save as a .bat file, then run it.

Move files to another folder:

```
@echo off
cd C:\test
move /y C:\test\testy\test.txt C:\test\test
```

```
Rename folder 4.0 to Westwood(4.0):
@echo off
cd C:\
rename Westwood Westwood3.4
rename Westwood4.0 Westwood
```

```
Rename folder 3.4 to Westwood(non-4.0):
@echo off
cd C:\
rename Westwood Westwood4.0
rename Westwood3.4 Westwood
```

Why do you rename the Renegade folder? That is not necessary as far as I know. The batch files for moving files around are a clever solution though.

If people wanted to swap from 3.4 to 4.0 of course. I did in the beginning.  
Most of the people we've told to make two folders just in case their 4.0 install went bad.

I can understand why you have two installs, but there's no need to rename them.
