Tried to open renegade this morning was given this error message.

Hadn't changed anything since the last time I ran it so dunno what the hell could be wrong.

Tried updating to latest beta to see if that would solve the issue and still no joy.

Anyone got any ideas?

edit* Nevermind examined my firewall settings and for some crazy reason it moved ALL TT
related items onto some sort of partially available setting.

Seems to be working fine now.

i'm retarded but how do i launch ren through the launcher
i open it from the game.exe shortcut and every time it's like NEYAHHHH failed to open through
the launcher you might not be up to date you stupid fucktard!

Run launcher.exe or UAC Launcher.exe. In beta2, game.exe will be the launcher and the real
game.exe is renamed to game2.exe.

If you have updated to beta2 already and still get the message, maybe the installation went wrong
somehow?
