I keep getting this error! I've setup BRenbot and RenFDS before, but not for a while. Never ran into this problem before! Attached is a Screenshot!

Use the version of brenbot from the 4.0 server package, it fixes that problem. Basically its trying to resolve the domain for ase which apparently no longer exists.

And before you ask, yes, brenbot for 4.0 (should) also work on older fds installs... It should actually work on everything from a standard 1.037 fds right up to 4.0

The only place to get the latest version of BRenBot at the moment is with the TT server pack. It has not been released separately yet as its technically still a beta version, although I am not aware of any major issues with it.

If you add to hosts file these lines:
69.10.30.248   master.gamespy.com
92.242.144.2 master.udpsoft.com

It will works. How typed danpaul. Domain master.udpsoft.com doesnt exist anymore thats causing that error.

Yes, that is one way to fix it but the better fix is to upgrade to the new version which doesn't even try to resolve that domain anymore.
