Hey,

It would seem that I am having problems with my TT server. Its not releasing RAM usage. After about 24 hours of uptime with gameplay usage and whatnot I had 300MB of RAM being used.

Just gameovering with nothing being done ingame causes the RAM usage to grow anywhere from 5-12MBs.

I put this on the TODO list for further investigation. Thanks for reporting.

Since there are two recent reports, I'm guessing this is new in beta 2 and did not yet happen in beta 1?

I found the changeset that introduced this error and it's pending for jonwil to fix (since I don't know what he made that change for).

Can the fix for this be released ASAP. Currently my server is using 1.5GB's of ram...

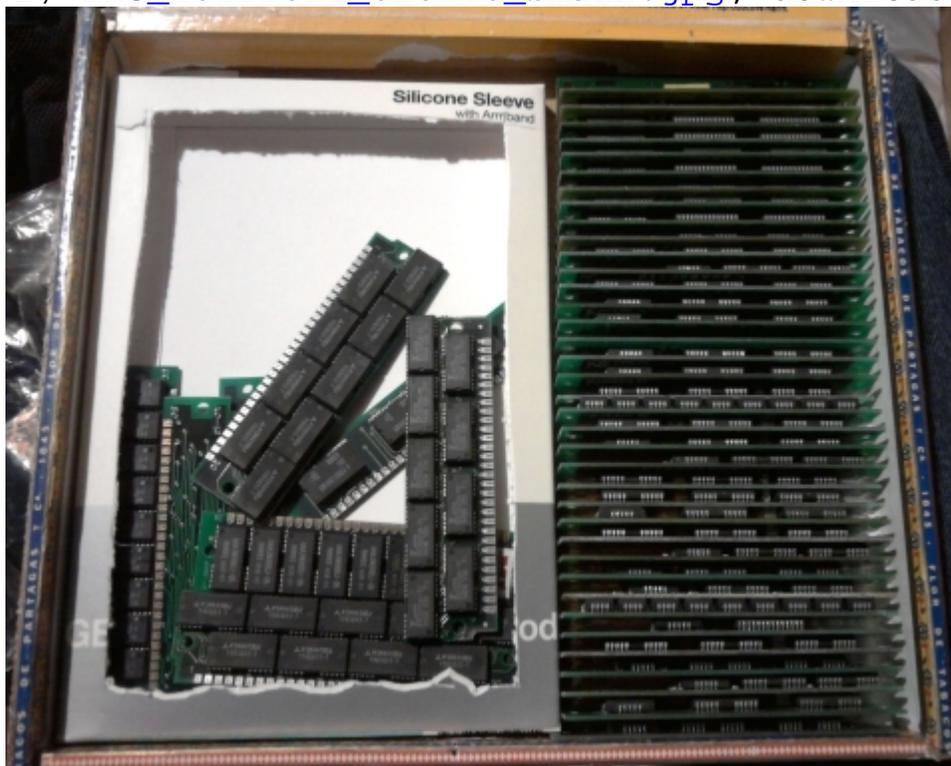

Im gonna run outta ram before long.

Its not even any type of dram.

Its 2-4kb SIMM sticks from the late 80's
