Hey everyone. So I was working on a model, when literally out of no where my W3D Viewer just stopped working correctly. I've reinstalled renegade tools in an attempt to fix it but it just doesn't work. I don't know if I hit a hotkey that jacked it up or what but it's really annoying.

This is what happens when I load it up:

As you can see it loads, but only the object controls shows up. I have no idea what to do..

Any help would greatly be appreciated.

Right click on the icon or the popup and do (Restore) or (Maximize)
