I get this error when I try to load up a level file.

Quote:

LEVELE~1.EXE - Unable To Locate Component

This application has failed to start because ttle.dll was not found. Re-installing the application may fix this problem.

I looked and it's in my ren folder. Is there some place else it should be or do I have an incorrect registry somewhere?

I don't think it should be somewhere else, so the registry path is probably wrong. I'm not sure but I assume it reads from /Software/Westwood/Renegade/InstallPath (not sure whether it's HKLM or HKCU).

hm, interesting. SEye is definitely correct as changing my InstallPath value in the aforementioned key affects LE-- but interestingly enough I got no such errors... my LE simply froze upon loading the main screen.

But either way, I'd still bet an invalid registry key is your issue.

It turned out his problem was busted graphics drivers.

The whole upgrade to my nvidia gfx card. I didn't know it auto updated, so I needed to restart my PC which I haven't done in over 2 weeks LOL.
