This is mainly directed at iran the rene guru, but basically when there is a big explosion in my screen, I freeze for about 5-10 seconds. Its pretty lame and wondering if anyone else has the problem and fixed it

Are you running TT or scripts or anything that modifies Renegade?

Im running just TT, I get it regardless of scripts or not :/

Also its the first decade, If that helps (probably not)

I have this problem as well, but it's more like 20 milliseconds, not 5-10 seconds... Try running Fraps to see if it fixes it for you.. I know it fixes my problem..

This happens to me on occasion, I usually just quit ren and restart it and then it runs fine, never bothered trying to figure out the cause.

I'm still getting fps drops, mostly whenever I'm in the enemy teams base. It was at 10 fps yesterday.... Pre beta 4, I never got any type of FPS drops.

If you're using TT scripts then please post in the TT forums. I know for sure that StealthEye generally doesn't read posts here, and I think this is also true for JonWil.
