---

Brenbot puked on me and I have no idea why this is doing this, one day it was fine. the other it was not, any ideas? It's running on a Windows 2003 server.

clean install, latest everything i believe

Quote:DBD::SQLite::db prepare failed: file is encrypted or is not a database

looks like the bot is using a different sqlite version br 1.53 uses sqlite 3 and br 1.52 uses sqlite 2.  
All the official brenbot plugins still use sqlite 2 I believe.

Actually this line is probably more significant;

[13:13:41] Database version data missing, your database could be corrupt...

BRenBot is unable to open the brenbot.dat file properly, suggesting it is either corrupted it has  
been copied over from a pre 1.53 install without running the BR SQLite2 -> SQLite3 conversion  
process.
