---

OK so I'm running 2 fds's and 2 bot's

1. Is my Co-Op Server witch is working find and is on diff ports for remote admin and ssgm.

2. Is my AOW Server witch is not working..

The AOW server works with no problems, but the bot is not working with the AOW Server??

I checked the ports on each server 100 diff times, and changed them again to make sure it's not a human error on my part.

still nothing...

EDIT: NVM Got it I added slave server in the server.ini, I just deleted it and everything is working GREAT.

NOTE to everyone running 4.0 servers Don't slave stuff in the server.ini
