How do I get it to show the ranks in my server?

I have it installed it's pointing to my fds it uploads the htm to my ftp, but when in game getting points etc it's not working.

NVM I know why Renstat isn't working right.

Because 4.0 server scripts moves the results.txt files to Renegade/FDS/, it no longer supports Renstat.

Is there away I can change that? so the results get's saved in the main fds folder?

you could create a filesystem junction afaik. Would put everyting in the FDS dir though. Or point renstat to the results dir...

I tried to point it there, but it also looks for the fds exe at the same time.

If only someone still had the source to it.

Then create a filesystem junction, or change the TT paths in some ini (can't remember the name currently, but it resides in the FDS dir anyway.)

Or you could copy the exe file into the same file as the results so it thinks its pointing at the right place. Assuming it doesn't try to do anything weird like hook into the in-memory process that should work fine.

Don't know how to make a filesystem thing, and there is no change path in an ini file...

So maybe you should google the words "filesystem junction" or "symbolic link"?
