I set Enable_CMSG_Paging to 1 in brenbot.cfg, but it still sends me a PPAGE instead of green
CMSG.

[22:38:46] <Blacky>   if ($line =~ /^The Version of the server is (.+)/ || $line =~ /^The version of
(bhs|tt).dll on this machine is (.+)/i)
[22:38:46] <Blacky>   { $brconfig::serverBhsVersion = $1; }
[22:38:51] <Blacky> this is why it not working
[22:38:53] <Blacky> regex wrong
[22:39:10] <Blacky> sversion
[22:39:10] <Blacky> >The version of tt.dll on this machine is 4.000000

The regex looks fine to me. If it wasn't working a lot of other stuff wouldn't work, I suspect any
cmsgp problem is something else

The regex looks for "The Version" while the output is "The version", it's the capital V in Version
that's wrong, unless regex is case-insensitive.

edit: didn't see the second match line

The regex is fine.

  # Record the version of the server

```
  if ( $line =~ /^The Version of the server is (.+)/ || $line =~ /^The version of (bhs|tt).dll on this
machine is (.+)/i )
    { $brconfig::serverBhsVersion = $1; }
```

but on this $line =~ /^The version of (bhs|tt).dll on this machine is (.+)/i

your setting "serverBhsVersion" to "bhs" or "tt" not script version.

(bhs|tt) is $1

need to use $2 or fix the regex.

```
  # Record the version of the server
  if ( $line =~ /^The Version of the server is (.+)/ || $line =~ /^The version of bhs.dll|tt.dll on this
machine is (.+)/i )
    { $brconfig::serverBhsVersion = $1; }
```

Fix people spamming a command?

As for the Regex matching group, it used to be $1 before I tweaked it to support tt.DLL as well as bhs.DLL, guess I just forgot to make it a non capturing group. Simple fix to make.

truncate decimal would be better I think, milliseconds always the same.
