This map I did was just for fun I wanted to merge Generals and Renegade stuff. I Tested it with a few people but am not sure how it will play with many players as a usable map.

(Requires scripts 4.0)

Enjoy!

You gave china vehicles to GDI, wtf? Was it because of the Overlord being the same as a Mammoth Tank?

It started out that way then I just got to lazy to change it. Also I removed sbh and patch.

I don't think it really matters tbh.

I didn't understand why the Battlemaster has Rockets.

Damn I wish I was there. I left after playing a long game of tropics.

@Xpert: I did that to hide some black patches on the skin which I couldn't fix cause I am no artist. But both the rockets and shells do the same damage.

There's an existing Renegade map where the creator imported the same assets, but this does look like it would be fun to try.

Unless your referring Scud Storm, which is a stand alone rts/fps game, I don't recall seeing any other maps with these assets except for two others which I did under a different nick (a busted account).

Keep in mind all structures were created by me from screen shots taken from Generals. The vehicles were exported from Generals but needed to be heavily reworked (by myself) for them to be usable in an fps game. This is something I have been working on for over a year.
