[View Forum Message](#) <> [Reply to Message](#)

This simple plugin will replace certain text typed by players with a different message (e.g. "repref" getting replaced with "Repair the Refinery"), I saw this feature listed on BlackIntel's website as part of their server-side mods and thought it would be cool to make a clone of it.

You can contact me under the nick 'iRANian' on renegadeforums.com.

To install place 'ChatAliases.dll' in your root FDS folder and add an entry for it under [Plugins] in SSGM.ini, then at the bottom of SSGM.ini add and configure:

```
[ChatAliases_AliasesList]
```

```
;List an alias and replacement here, note you can't have "ERR" as replacement text
```

```
repref=Repair the Refinery!
```

```
.strush=Get Stealth Tanks and let's rush!
```
