Hi everyone

I'm just wondering, but when go to the online list, it says my connection is a 56K, which is not, cuz i'm on a T1. And i don't know why i get 141 pings...
One more question, when i click refresh, r the pings supposed to refresh too? Cuz all i see are the number of players in the game refresh. I'm just frustrated cuz it's been laggy..like choppyness...which isn't fun =(But single player IS GREAT!

Thanks

I dont have the game up right now but you can change the connection type via the My Information screen in the left hand side pop-out menu. Your ping is independent of your conection type. Faster connection doesn't = lower ping. The pings do refresh, I dont think they refresh everytime you refresh the server list but I know they do -- I've taken note of this (the pings never go up for me, always down   ). Part of the reason for this may be to reduce network traffic to the game servers.

Hope this helps,

The One
