We have some unconfirmed reports that screenshots are broken on XP. Can people with XP test and confirm if screenshots are working or not as none of the TT devs have an XP setup anymore?

Virtual box?

I might test it if no one else does I got VB set up with xp ;p

Screenshots are working fine.

The last time I took a screenshot was the 24th of July.

Running Windows xp 32 bit sp3.

I'm running XP and can't take screenshots.

Edit: It's been awhile since I've last played, so I thought maybe I wasn't using the right key... Print screen doesn't leave any screenshots in any of renegade's folders and neither does any of the Fn keys.

Do you use XP SP3? Or XP x64?

Just to be sure, you did check My Documents\Renegade\Client\Screenshots\ right? That's where screenshots are now written.

I remember LokiDog's sshot function wouldn't work with the server, he was running 4.0 and running Rene in his monitor's native resolution didn't fix it either..

He was getting "screen out of focus" errors on the console and he was running Win XP SP2..

I've noticed that you get the screen out of focus error when someone is running as windowed. But you should only be receiving this error if they don't have Renegade open on the screen at that moment, if they was on Firefox or something for instance.

Plus, I've heard the story that he's running a pirated version of Windows xp, so am I and !sshot function works fine on me.

Before beta 5 I used to occasionally get screenshots like this:

Since beta 5 I haven't had any problems and I take tons of screenshots.

XP SP3 32-bit. Just took a few screenshots with PrintScreen right now, both without Fraps running and then with. They get put into this directory, for those who can't seem to find it:

C:\Documents and Settings\<usernamegoeshere>\My Documents\Renegade\Client\Screenshots

Toggle Spoiler
