Oddest problem. I get all the way into the game and can see people playing but my input devices don't do anything..mouse, keyboard....I'm sure I have all required elements..scripts 4.0, legal disk, etc. Just odd.

So there's no escape button since the keyboard doesn't work and when I use task manager to kill the program it kills the screen but I'm still hearing the game on the speakers!

I've re-installed all the programs with the same result...crap, I just noticed it does the same thing in single player! I wonder if it's a Win 7 prob. If so, it's bran new. I was just playing yesterday.

Any ideas? Thanks!

It's possible your configuration was corrupted; re-installing Renegade would not fix this because scripts 4.0 moves it to Documents/Renegade/Client. Try deleting config.dat in that folder.
