Hello people,

as some of you may know we are running a new maps server with only new maps in rotation which has become quite a success lately with often having more than 20 people in there.

However, we seem to be attacked by someone every evening now it seems and all players lose connection to the server.

I'm getting a little bit tired of it now to be honest lol.  
I don't know who is doing it either.

Does anyone know of measures i can take to maybe stop this?  
Jelly(raven) has already given me snort and some tool for xwis but they don't seem to work against this guy.  
At least not in its current configuration. If anyone has ideas please let me know

So fucking sad really that people attack the server, if you happen to know who it is, you don't have to tell me or anyone about it but just tell them to stop. Thanks.

Anyway, if there is anyone with ideas please let me know.

Thanks.

As i said in IRC before, first thing u need to use on the Root ( if u run Windows) install a netmonitoring tool, so u can basically filter out the IP that attacks you. If u run linux there is a tool named fail2ban. If u caught the IP of the flooder u can investigate some time and email the provider of the ip adress, they will most likely take care of the Program. Worked for me, floods on my Root stopped then.

Yes, It's very sad to see someone go out of there way to attack a server on a game that is 10

years old. What a fucking waste. MPF is a friendly community, the person that is attacking is either jealous or is attacking due to idiocy, and it's LOLZ to them. They don't want a 4.0 server that runs something other than the boring standard maps??

this really is sad news..hope you catch the ip of the person who is doing this ...

chances are it's some one who has a grudge against either the owner or admins or even another server owner who is upset that you are taking their players

Apollo/ProjectX/whatever he calls himself was just mass-joining Jelly with IRC bots a couple of days ago, I believe he was involved with St0rm in some way or another - maybe that could be it? Or if you ask shaitan, it's probably me.

Snort is what we use on Jelly's box, and it works quite well - it could very well be that the person that is attacking you is actually exploiting a bug in the FDS to cause it to crash, and not necessarily a simple packet flood like most attacks. But I see you said that all the players just lose connection, so it probably is just a simple DoS or DDoS attack. Do the Snort logs indicate anything?

We tested snort by attacking the server ourselves a couple of times and it worked. It picked up the attack and logged it all.  
But whatever this guy is doing is not being picked up by Snort.

it could very well be that the person that is attacking you is actually exploiting a bug in the FDS to

cause it to crash,

~~~~~

didnt this happen to another server and sure there was a fix ?

in most cases the person attacking has a motive in the past we have see server owners or admins do such things if you are stealing their players ....

what server are loseing most players du to your server being better ?

I have a idea and the same person worked with wilo with his crashing . but no point in just nameing names .. they will slip up and give away something that will lead to catching them

Although there was a exploit that did cause the fds to crash which is what Wilo was doing to Jelly, I'm sure others knew about this too.

tbh, it wouldn't surprise me, if he was actually behind these attacks as he certainly possesses the knowledge to do so.

althou I dislike iran .I do find it wrong to say he may or maynot be attacking servers. rumors and lie's will spawn from this thread and in to other forums and game. till it get's to the point where it becomes true renegade history fact .

and lets be real there are loads of players or ppl that used to play who could be doing this for lots of reasons.

it could even be you azazel ? who knows

beyond shitard just randomly nameing anyone who he dislikes.

this do,s sound like the [ wilo gate scandal ] and has all the hallmarks of the same kind of attacking method to attack all server's to cover that it maybe a server owner ? or someone linked to one server.

I wonder when that person is cought out will all of ren again kill the entire server and all it's players ? or just target that one person who is doing this maybe throu lawfull ways.

ps..wilo if your reading this I said attack shiton only not the whole of ren. or no payment

Have you monitored BW usage? does it spike during the attack? If so, (D)DOS, if not, attack on the FDS in which case you should ask Seye for help (wiresark capture of the attack in that case).

It's not a [D]DoS at all, in fact, when this happens it doesn't even go above a 10th of what the upload speed is capable of. What does happen is the network hovers around 7Mbps consistently (from people ingame, etc), drops down to 0 and then shoots up to like 12Mbps, goes down to

2Mbps.

The 2Mbps represents the activity in teamspeak and another game server, all which is completely unaffected when this is all happening.

Wireshark is a resource hog and crashes after an hour or so of being running..

No need to be offensive if I explain how you can solve it. But in any case, have fun solving it then.

Also, it dropping to 0 implies something wrong with network/network config.

I wasn't trying to be offensive and I can't see how I was, but if I was then I apologize.

We've been using DUMeter btw, which may be buggy but it's definitely a good tool to have. Shows  
utilization (which is how I can tell it's not a DDoS) but doesn't specify what connections are made.

You know what man, fuck it.

Just lost 21 players again because of this guy.

I'm not gonna get upset or try anything anymore as it doesnt seem to work anyway. And i also happened to not be capturing packets at the time so nothing was logged.

I'll just play a map or two sometimes and make sure that the server is restarted for those who do want to play still.

I hope this n00b stops this soon but probably not.

I'm gonna focus on Global Offensive again, fucking rengay aint worth it lol.

No offense at all, but that's why you capture it at all times...

I'm sorry somebody is attacking your shit, that's really sad - you run the only server that actually plays new maps in the entire game at this point. Don't be discouraged so quickly, just leave the server down for a couple of days and cool off - then put it back up and see what happens?

From the description of what happens (mass disconnect of players) it seems like the same thing as what Wilo did. Considering wilo's friend is active exploiting brenbot bugs on jelly and st0rm.net is a wasteland, it wouldn't be surprising if it's him.

One thing I can't remember is whether Jelly found an actual method to stop the attacks or whether the attacks themselves stopped.
