Just got a new motherboard i5, 16 GB RAM, and the game installed fine and I got into the rooms. But of course I was quickly told to get scripts. Downloaded and when the green bar gets almost to the end, it says 'installation failed'. It's always on the same file too...the one that ends in 'silent'. Any ideas thanks.

Oh, and I created a Norton block for that file and it seemed to bypass the AV but still didn't install. Thanks.

Can you try to install TT without norton enabled? It has been causing problems in the past.

Norton is one of the world antivirus's that has ever been created.

It's not doing you any favours, remove it and install something that's far better.

Microsoft Security Essentials, it's free too.

Thanks I'll try it. In the new Norton however, there is no 'enable' /disable button icon. I'll have to find another way.

Thanks that was it. I had to completely disable Norton. Isolating the file for exclusion wasn't enough.
