I have a feeling this has to do with a duplicate being created by LevelRedit, I could only find one building controller however and deleting it had no effect. Any ideas?

I remember having that problem before with LevelRedit.

Check the instances in either buildings or tiles.

LevelRedit seems to load building arrogates in tiles making duplicates sometimes.

I can only find one entry and that's in Buildings. It also happens to be the one I tried deleting.

EDIT: The map I'm messing with is Alpine if that helps.

What happens if you remove the Obelisk building controller? IIRC what I did was removing the Obelisk building controller and re-adding it.

After deleting the building controller and creating a new one the Obelisk now fires 3 beams.

One of which appears to be from over the spot the new controller was created even though I moved it afterwards.

With no building controller it still acts like a building and still shoots me twice.

When before it was three times, or is this on a new map?

post a fresh copy of the levelredit conversion.

C&C_Apline.lvl or what ever map it is.

Works correctly for me.

Just generated path finding and the usual stuff.

I have no idea what I was doing to generate the second beam but thank you.
