TT auto updated to the new patch, but ever since it did, when I click on renegade either on renlist or the exe I get the following errors.

'unfortunately there was an error loading tt.dll please report this bug'

'unfortunately there was an error loading scripts.dll please report this bug'

Any help?

Thanks.

I'm not sure what's wrong. Please send a .zip file with the contents of your Renegade folder except for the data folder.

Also try downloading and running the client installer from http://tiberiantechnologies.org/downloads and see if it resolves the issue.

I may have just realized what happened. My free disk space is 0 so maybe the patch updater couldn't install it fully that's why the relevant files are missing. Will try and free up some space

Sounds likely. Thanks for posting the (probable) cause.
