When I open it I only get the object viewer box and nothing else shows up.

How do I get it to show me the .w3d I want to see?

I've tried everything I can think of to get it to work from setting the .w3d to open with the program, click and drag to the program (both open .w3d view and closed), put the .w3d file into the w3d view folder (tried several files), land even removed the asset report from the folder.

---

If it's something simple then what am I missing and if not then what haven't I done?  Is there some command line commands I have to use?

Go to your taskbar button, hold SHIFT and right click the W3DViewer in taskbar. Click Restore, or Minimize then Maximize/Restore.

PS: You coulda just asked me on IRC, nab.

If your on windows Vista+ you can also hover the mouse over the task bar icon, when the preview window pops up, right click on the window, and then click maximize.
