Quote:i have a few technical issues going on, first one being , I purchased the C&C ultimate collection.. i made a new xwis acct i logged onto ren multi , i was able to get the listings of games to come up, but the jelly games which btw are the only ones that show people ingame, are not highlighted in yellow rather i can not even click on the server to enter it.. the other servers which had no people when i clicked on the server it shut my game down as an error. since that suggests he didn't have the map(s) being played at that time, a player recommended getting scripts 4.1

Quote:ok i have DL the files in the link you gave me.. when i start ren I can now click on the Marathon server but when i try to join it my game crashes and closes.. this is the report I am seeing thru windows.. I have re installed ren and still having the sme issue.. Problem signature:

```
Problem Event Name: APPCRASH
Application Name: Game.exe
Application Version: 1.37.0.1
Application Timestamp: 21214d44
Fault Module Name: Game.exe
Fault Module Version: 1.37.0.1
Fault Module Timestamp: 21214d44
Exception Code: c0000005
Exception Offset: 0021a565
OS Version: 6.1.7601.2.1.0.256.1
Locale ID: 1033
Additional Information 1: 7bae
Additional Information 2: 7baeab40711578bc29126ddf5221efa1
Additional Information 3: 035e
Additional Information 4: 035e503f7db90915e3cf4353b1d36231
```

is this an issue that's been covered already on here, or is it something new?

That information isn't enough to debug things, if it crashed it should have made a crashdump which is what we would need to see.

If it didn't make a crashdump then we either have a bug in 4.1 or we have something wrong with his install.

I am the old player that this post is about, when i did the DL of the 4.1 patch this is what came up .. btw hello everyone its been a long time

File Attachments

1) [threat.PNG](#), downloaded 502 times

The screenshot shows the Norton File Insight interface. At the top, a red banner with a white 'X' icon states: "This threat has been removed. No further action is needed." Below this, the file name "tt-scripts-4.1 (1).exe" is displayed with a document icon. Underneath, the "Threat name:" is listed as "WS.Reputation.1". The "Details" section shows "Unknown Community Usage, Unknown Age, Risk Medium". The "Origin" section indicates it was "Downloaded from http://www.tiberiantechnolo..." with a green checkmark. The "Activity" section shows "Actions performed: 1". On the right side, there is a "Show" dropdown menu set to "File Actions" and the file path "c:\users\charlie\downloads\tt-scripts-4.1 (1).exe" with the status "Removed". At the bottom right, there are buttons for "Copy to Clipboard", "Restore", "Options", and a prominent yellow "Close" button. The Norton logo is visible in the bottom left corner.

Disbale your AV as per the FAQ in the installation instructions.
<http://www.renegadeforums.com/index.php?t=msg&th=39331&start=0&>

Norton is known to give this false-positive.

Yet another reason to add to the list of reasons why Norton is a piece of crap

You can also click the blue text that says "restore" in that dialog.
