---

How can I include DDS with backslash and plus sign in them with makemix.exe? it will give an error if I place those files in a directory with the plus sign and backslash and I can't create file names with backslash in windows.

It represents a file folder, that isn't actually part of the file name, if you extract them it puts them in a folder named obl\_int\_lm003+ with 0.dds - 5.dds in it.
