I've finalized 2 maps I've been working on for a few years now(took a 3 year hiatus), and they are now complete. I can't upload them here due to file size restrictions, but I provided links below.

C&C Backstab is a small to medium sized AOW map where your base is back 2 back against your opponents. Look for the custom spawn vehicles, and a few hidden access points! Enjoy!

C&C Halloween 2014 is a very small death match map with a lot of goodies and custom bots. It also features a custom sound track for a spooky experience!

It looks like in the screenshot for backstab that you need to run generate lighting. The interior lights for the airstrip are leaking out of the building.

I'll take a look later, was it a picture from LE, or in game? If it's just a lighting issue and if it doesn't affect game play, I may leave it alone.

All you have to do is open up leveledit and under the lighting menu, run compute vertex solve. Check the box for check occlusion as well. Then save the map again.

I saw what you meant, I was and still may leave it alone, but when I ran vertex solve, some other issues came up that I had fixed once before, but it was so long ago, I forget what I did. I'll get screen shots when I can.

Of course, download Renlist and have a look for yourself!
