Hey,

Im a betatester of a new secret mod.

I have a problem with a few maps of this mod, but the maker of the mod doesnt know whats wrong :S......

The problem is that my pc is restarting automatically after loading the map. Its just weird.... I get the loading screen... I see myself a few sec. inside a building sometimes I can even move a little bit, but then it restarts :S

I think it has something to do with my videocard, because another betatester (with the same videocard) has the same problem.... All other betatesters dont...... (PS: I have ALL latest updates/patches/upgrades)

Does some1 know what the problem could be?

Are you 100% sure you have the latest custom scripts...

I did not installl the scripts before and when I ran the RenAlert mod loaded it restarted...

If you do have the latest scripts it is probably your graphics card as General Havoc said if not it is one of your hardware components.

Try reinstalling, you might have a load of crap in your renegade directory, - ive noticed a slow down in game reponse in all westwood games as you install maps, mods and image files.

Or delete a few maps you dont play.

Renoxim 99% sure i have the right scripts.dll

and er... i have an nvidia Geforce IV Ti4200 (AMD 2000 XP+,512 m ram)

I have the same card and processor, but you have double my RAM. With my computer I never have any trouble running Renegade. If it isn't the scripts, then maybe you could try new drivers or if it comes to it reinstalling Renegade.

Same here i have the exact same PC but half the ram. I can't see this being a hardware fault because it's just renegade that is effected. Also the GeForce 4 ti 4200 on my system is very stable and I have had no problems related to it. Other than that it's something to do with the map which is more likely considering its what your experiencing problems with.

this sometimes happens to me
usally it only happens the first time i try to run it after that it fixes
