Just a question to fuel my next project...

Question:

How many of you have an Internet Service Provider (ISP) that terminates the dialup connection after a specific period of time has passed (for example 2 hours)?

Many people from the UK who use services like Freeserve AnyTime or BT OpenWorld will know exactly what i mean.

I just need to see if there are many people here this applies to.

Thanks.

They don't disconnect you at all unless they get really busy. They don't use MS compression though, so they aren't as fast as BT.

I might have access to a T3 if I secure the flat I've wanted for the past 2 years, but I aren't going to hold my breath. I am resigned to my 56k for now [url]

Yeah, euro dial-up sucks...

They don't disconnect after a certain time over here... I haven't seen a isp here that does that.

(and i'm on dial-up...)

Well, if your using free, its a bit hard to complain...

But the only other way I would know would be inactivity.
Some (almost all) dial up isps will disconnect you if you go over a certian period of inactivity.

I had BTopenworld Anytime but got kicked off for over use so i went to BTopenworld ADSL.

Trust me if you live in the UK Dial up internet services are not worth using. There is an auto cutoff after 2 hours and you can't send a "heartbeat" to keep yourself connected it happened no matter

month, which to us is nothing. Also you can't use the phone at the same time meaing the cost of

can be used whilst online with no affect, and a data rate of 512K. Hardly seems worth the cost for dialup, i can never go back to it now.

512K: 200 Megabytes / Hour average (max 230.4 MB/hour @ 64k/s)

56K : 15 megabytes / Hour average (max 25.2MB/Hour @ 7k/s)

O_o I'd get ADSL if the garbage eating stink bags of BT would get their arse in gear and connect my area.

errrr....Freeserve DO disconnect you after 2 hours as i have had this deal for the past month at

and BT oh dont start me with them.....they disconnect you after 2 hours AND they give you a 150 hour limit a month thats why i changed to freeserve

i know there is a way to stop the 2 hour lease that the ISP give you..but my teacher at college wont tell me

i'm hoping to get 1mb from NTL if they move there fukin asses in to gear

The only ISPs I've heard that disconnected you after a certain time (or charge by how long you've been online) are European...

The ISPs over here don't disconnect after a period of innactivity...

And in what form of innactivity do they disconnect you for? If you havn't visited a webpage in so long? If you havn't clicked on something in the window etc.? If your modem stops sending info for so long? Etc?

The disconnect due to inactivity thing is a windows setting. I've haven't heard of the kind of disconnection described above happening since the early 1990s, even if they DO still do that, all you need is a program that goes "Oi!" every so often.

AFAIK, my ISP never disconnected me after being online for several hours. I do not know about disconnects when being completely inactive for several hours, however, because I try not to

I really feel sorry for you guys on your 56K modems, especially if you are in the UK.

I had that piece of complete and utter crap from BT about 2 years ago and I got disconnected every hour or so without fail. Also if I kept trying to reconnect eventually they just locked me out and I would get error messages such as the "the line you are dialling is busy". I would have to wait

and then don't give you a service.

In the end I went to BT Openworld ADSL and so far have not had any problems with them, no cutoffs, no capping, consistent high speed and low pings. I know the Broadband companies are pretty slow at rolling out to other parts of England, well any where out of London really but here is a link that might help: <http://www.adslguide.org.uk/> Here you will find the latest news on Broadband companies in the UK and there is a section where you can register your interest in Broadband in an area it is not currently available. Many companies set a threshold of "interested" users for a specific area, once this threshold is met they will install Broadband in that area. You can register your interested for you area at [adslguide](http://www.adslguide.org.uk/), I would suggest doing this if your area does not currently support Broadband.

Later

Wee

i hate it when people host these SMALL servers 4v4 or 2v2 and say no 56k..i ask them why they

say they lag games.....on these small games that a 56k can handle up to 16 players..... and on dethserv 32 player i luagh when people blame me and my 56k for the lag..when i have none..and no one else has lag

maybe people could ready up on how the internet works and how busy ISP can get and the amount of internet traffic is around....dont always blame a 56k lag when its your ISP....

Breetomas is absolutely right.

This is a screenshot of the program so far...

<http://www.spliff.wideboys.co.uk/files/pictures/dialupwarning.jpg>

The purpose of this is that if your internet follows a time limited session, it will inform you that the connection will soon disconnect. Many people have complained about Renegade, that if your internet disconnects mid-game you cannot reconnect to WOL for a few minutes because "your nickname is currently in use." If you were to leave the game, reconnect your internet then you're able to rejoin instantly, without waiting 2-3 minutes.

I hope i haven't given people the wrong idea about this project. I'm just fine tuning this little app right now, shouldn't be too long before it's ready.

Okay, second screenshot with the changed user interface.

I'll be running this through some tests over the next few days, if there's anybody else that would like to beta test it with me. It'd be very appreciated. Thanks.

PLUSNET..... 1ST CLASS ISP.
BT..... forget it!!!!!!

we dont give a f**k at what speed you have on your broadband

didnt you read the topic : Dialup Internet Users
this does not mean..you..so..err...*** off

this is a great idea as the only warning i get that im gonna get cuz off is a slight puase 1 sec
before it cuts off lol
