learn a bit of mathematics. It will explain how a computer can "read" your mind.

5, 9, 18, 27, 36, 45, 54 and 81.
See the pattern?

Again this has been posted before.. god..

Plus i tried it 10 times, it got it 3 times... it got it wrong 7 times...

It couldn't have got it wrong... The symbol will be the same no matter what numbers you choose.

Examples: 75: $7+5=12$; $75 - 12= 63$

74; $7+4=11$; $74 - 11=63$

73; $7+3=10$; $74 - 10=63$

63; $6+3=9$; $63 - 9= 54$

It is the same for other numbers. The symbols will match each other.

So saying that it got it wrong 7 times is a lie. You just can't add or subtract correctly.

since when is $74-10$ 63?

and you say HE can't add or subtract correctly?[/quote]

That was a type error. If you notice the original number was supposed to be a 73. I looked at the number above while typing and probably put a 4 instead of a 3. My mistake.

Afromn96i did it with 69 and it didnt work
6+9=12;69-12=57
Maybe 6+9 is for you 12 but for me it is 15 see to many dumb ppl here. It is always correct because it is always 0, 9, 18, 27, 36, 45, 54, 63, 72 or 81

.....
.....
.....

:rolleyes: :rolleyes: IT MONITERS WHERE YOU PUT YOUR MOUSE AT DUH :rolleyes:
:rolleyes:

The mouse's position has nothing to do with it. :rolleyes:

It's basic math.

When you add the digits of any two-digit number and then subtract it from itself it will always be a multiple of nine.

Thats a little trick I like to call "math."
