When i go into the list of servers at WOL, at the very top I see something that says i'm connected with a 56k, but i have a cable connection. Is this some setting i have missed? I always lag a whole lot more on Westwoold Online than i do Gamespy, and it was thinking this might be the cause of my lag.

HomeyMy 4mbps clocks at 56k, firewalls own

Yup.

Due to Westwood's poor Net Code, You should set it at T1 and manualy figure out how much players you can handle.

i agree manually figure that out. dont fool round with the test connection. if your on a netwoork and others are using ur internet 2, it will set you low, and the WOL con could be filled to. dont fool with the test con. just settit at T1 and have the players at 16 for a cable modem, mayb 10.
