u must have really low memory if ur using Gmax. U can either 1: get rid of all of the un-needed programs, or 2: buy more memory

Skier222u must have really low memory if ur using Gmax. U can either 1: get rid of all of the un-needed programs, or 2: buy more memory

Getting rid of programs will do nothing.

Press Ctrl Alt Del and shutdown un-needed programs, you might have spy/adware running on your computer.

I dont think buying more memory is a possibility at the moment 'sigh'.
I cant do a damn thing till i fix this.

No, you said to delete programs, which would only save hard drive space, Beany said to shutdown running programs, which will save memory.

Subject: adware

Does the fact that my bro has several junk maps add to the prob and take up virtual memory?
