I downloaded the LFDS today and to my surprize theres no renrem in it. So is there a version of renrem that works on linux? If so, where can i download it?

There is a linux version of renrem, but ironically it only works if you connect to a WIN32 FDS. There is something in the LFDS that mangles the packets and it doesnt work natively. If you are connecting to a linux FDS, try Macs renrem replacement, it works nicely.

Unfortunately there's just an email address listed there to "request" a copy but so far I've not heard back.
