Hey I need some help with my 56k.

Is there anyway I can reduce lag while I am in-game?

Please don't say "just get Broadband" as some of us can't get it.

Any help and I will be very grateful!

The only thing I can think of is hit F8 ingame and then type c for client physics optimization, then after that hit spacebar then 1 to enable. That makes less lag ingame, but 56k is asking for lag central in Renegade.

dont play in any servers over about 16 players...and that's kind of stretching it. check out the BCServ servers which are 10 players each.

You have to press spacebar and 1 to activate it? At the same time?
