OK I have gmax and renegade tools installer installed. my gmax is installed in c:\gmax. my renegade tools installer is installed in c:\program files\renegadetoolsinstaller. when i try to run RenX it says: The object that 'C:\WINDOWS\Desktop\RenX.Ink' refers to has been removed or is unaccessible. In the tools setup when it asks to verify the location of the gmax folder i put down C:\gmax. Can anybody help me asap.

In the tools setup when it asks to verify the location of the gmax folder i put down C:\gmax. Can anybody help me asap.

un-install the tools installer2 and reinstall it, but install it in C:\gmax and let it do it's thing.

rightclick your RenX sortcut and edit the run command to this values:

```
C:\gmax\gmax.exe -a C:\gmax\gamepacks\WestWood\RenX\splash.bmp -i
gamepacks\WestWood\RenX\gmax.ini -p gamepacks\WestWood\RenX\plugin.ini
```

This only works if you have told th RenX installer your gmax directory while you installed (it onec asked where to isntall Publictools and once where GMAX is located)

Try this if that don't work, I'm sure you'll tell
