ohmybad I have windows 2000 on my computer and I use the tcp/ip internet protocol and when I look on the network(computers near me) I can only see my computer and none of the others but I can still go on the internet. The same thing happens with my dads he also has windows 2000. Im clueless

You need to set the other computers up for file sharing.

Also get IPX running on all your machines. It really doesn't matter, but it is nice to have set if you decide to have a LAN party.
