Ahh, boredom - such a wonderful thing.

Well, i was fed up and bored for 10 minutes so i made the program...
<http://www.thecodesmith.com/download/CastleHelper.zip>

The screenshot pretty much explains it all...

I suggest getting at least 200 wizards before using this, so you don't run out of wizard power as it will kill everything the mouse passes over.

Just move your mouse over part of the flash game, and hold ctrl/alt or space and bye bye enemies... enjoy.

My god who needs to cheat when you have 400+ archers. Though the convert spell is useful I can live without a program to do it for me.

ArUsH4nllexactley my point ~~~~~

Lol, what he said has nothing to do with or is similar to what you said. Your point? He created a little program out of boredom (that doesn't even work) for a small flash game, you have no point what so ever.

As he said, why WOULD YOU NEED to have a cheat program for it?

I'm not sure what it is on NpSmith's latest version of Autocomplete, because I was using the older one when I did it I'd have to remake the whole thing, but it's generally really easy.

Like I said, what you said and what he said are not similar in any way. You really need to go back up and read what he wrote, you obviously don't know what he actually posted.

Isn't it possible to just copy the autocomplete ini file into your new version?

Sorry.

And i know he would totally own me, i suck bad

And I also use Auto Complete, it RULES.

Peace.
