WOL hasn't been workin for me for about 3 months, so I finally have decided to re-install Renegade. I copied all the important .pkgs and script from my data folder, and stored them away in another one. Now when ever I'm installing it during the always.dat coping, the setup crashes, and a I get aRenegade Setup Error. "Cabinent File System Error 4". This happened twice so far, last time it ocured earlier in the installation though. This really sucks, it's holding up my SS progress.

Whenever you uninstall and reinstall something, it always helps to delete the root folder and all traces of the program that you can find before reinstalling. If you have something like Norton Utilities, those are pretty good at rooting out remaining files and registry entries. Clean out EVERYTHING you can and try again.

It sounds like your CD is scratched.
