Now, we have all heard the n00bs shouting, aimbot, aimbot.... But I now know that there is in fact a aimbot of some sort. Most regular renegade players on the Euro server will possibly know myself Pippy007 or my servers Pippy008, Pippy009 (Must apologise for the lag over the recent months, damn NTL crap cable company, going back too ADSL soon).

Anyway, myself and several others were starting to get suss about this one guy (OLi0LLi0L at a glance it looks like 011011101) Just checked his stats actually and in 21 games he has 701 kills which is an average of 35 kills per game, not that high but its very high for an average. The games we were in he was getting 50+ kills in just a short 30 min game (btw not sniper games, normal games on the server4cc server) As a basic soldier I watched him take out a sniper SBH (CLOAKED! and too far away for him to see him) and a Ravenshaw all as a basic soldier?? Every shot was a headshot and then he became a sniper on the next game and as soon as he saw someone that was it they were dead and of all the sniper games I have been in and played with various excellent snipers, NONE were as quick as this guy. There was myself, topcat49K, geeti, loopyuk, zephillius and several others telling this guy to either leave or stop cheating, but he never said a word, just carried on cheating. It didnt matter what character he was he would get straight kills ALL the time...

So watch out for this guy and any others as this is really gonna ruin renegade.

Cheers
PIP

Dude, there is no aimbot, you'd need to change the whole source code, and that'd conflict with
other players online, the only 'cheat' that exist is the so called "click-bot".

...I did not write black. [and no I did not edited my comment because there would be an edit tag]

Now stop thinking that your sooo 1337.

The guy is good, way better than you, you seriously need to take it kid.

He's not the only one by the way.

And I told you , I have experience in cases like this,making an aimbot would mean totally changing the game's source code, which means, MP version conflicting, which means : he cannot play online with other players that are not using the so called "aimbot"

The only thing that the guy could've used is the colorbot/click bot (when the reticle turns red, you auto-fire)

Pippy007wtf you talking about f00l?

I am white not black, I dont live in a ghetto (in fact not sure we have them in England) I like punk rock yes. But just what the hell has any of that got to do with me telling everyone a fact??

ive also seen this OLi0LLi0L doing some odd things.
earlier today he was in BCServ4 and had something like 30-40 kills after 10 mins(in a 24 player server). just about everyone in the game was saying he had a aimbot.

Subject: Aimbot 4 REAL!!
Posted by Javaxcx on Wed, 09 Jul 2003 02:43:05 GMT

There are no cheats for Renegade. He did better than you, and you're attempting to justify your lack of skill by accusing him of cheating. 35 kills in a non-sniper game is very easy. Hell, I've had over 130 in a 20 man server. I don't cheat -- I can't. There are no cheats. Maybe if you practice a bit more, you won't have this problem, and you'll realize what a fucktard you've been for resorting to childish whining and crying because you lost at a videogame.

Subject: Aimbot 4 REAL!!
Posted by Imdgr8one on Wed, 09 Jul 2003 02:43:30 GMT

I am not goign to enter this war, but Aprime is right, the only way to make an aimbot would be messing around, and would make a mismatch for all servers. Which means even if they did make an aimbot, they could not use it online. There is a click-color-bot but that isn't very helpful at all.

Subject: Re: racist
Posted by John Shaft Jr. on Wed, 09 Jul 2003 02:52:52 GMT

Pippy007If your gonna be childish and especially racist, then I know its not even worth it with a kid like you.

I agree with Aprime. You are in a sense of Denial. Pippy007, you used sterotypes to explain your reason on why you are not as they say "ghetto".

Anyway, I shall leave you with what Crimson just said.

CrimsonListen... EVEN IF an aimbot existed, it would not have the same effect on Renegade as it does on CS. CS is all about shooting. Renegade is about destroying bases. Aimbot does no good against a tank. Aimbot does no good if you're in a tank (ya gotta LEAD the target). Aimbot does no good when you're in the field and an APC runs to the power plant full of techs and you can't see them in there to kill them.

Yes, an aimbot would probably kill off snipe-only servers. That's about it. And our tactics in-game would change drastically... but, overall... once we stopped running into the field because we know

the sniper WILL get us, they will get bored of having no kills and stop.

That being said, I still ain't seen no aimbot that actually works. I've seen two... both are color-based, and even with the color heads added, you still have to aim. It's a clickbot, and nearly useless... not worth the trouble, really.

Last night was a really bad night for me and I shouldn't have re-acted the way that I did and I apologise for my ranting, it was childish I agree but when someone gets me pissed off like this guy did and also the fact that I am off work with a sicky at the moment due to a weird fever I seem to have picked up somewhere, my temper was very short.

I will try and explain a bit better...

Imagine the best sniper that you know, the best of the best kind of thing or even someone you know on Ren who is the best player that you know about. Imagine that he started saying that someone was using an aimbot, now would that make you stop and think for a minute? I have said several times over and over again to n00bs myself that there are no cheats or aimbots and they are just crap. Just imagine that someone has got an aimbot somehow... all I am saying is keep an eye out for this as Ren to me is the only game I have really played since the beta came out at the end of 2001 and when the demo came out in Jan 2002 (despite all the lag issues that came with

as I used too as other things have been happening in my life but I still play it at least 25 hours a week. If you do not believe any of this, have a look at my stats at....

http://renchat2.westwood.com/renegade/game_results/pippy007_individual_stats.html

Most of this I would say is true but some of these stats are not right for some reason? it says Total 8403 on losing Clan which is very strange cause even though I do have a clan, we rarely play clan

Myself and my other clan m8's just tend to get on the same game's or play on my server, its more of a social thing our clan, a group of m8's playing together. But if you look at the total time played you will see it says 7135508, now I presume that that is seconds, so if you divide that by 60 (seconds) and again by 60 (minutes) and again by 24 (hours) and again by 7 (weeks), you will find that since Ren began, I have played almost 12 weeks SOLID! Night and day which roughly works

other people in Ren and I have not seen anyone else with that amount of time on Ren, there quite obviously is a lot of people that play it and bound too be people that HAVE played more than myself, but not a great many. This therefore makes me a bit of a Ren veteran I would assume.

In all the time that I have played Ren against some of the very best and very worst I have never ever met anyone like this OLi0LLi0L in that he NEVER misses a single shot and yes you may

think that I am pissed off because he beat me, the fact is in all of his 200 kills for those few games he probably got me 3 or 4 times and it was when he got me the way that he did AFTER I heard everyone else shouting about this guy that I actually believed it myself. This is not some kind of red dot thing, this guy would spin round and kill with one shot immediately EVERY time and it was

it was on the Hourglass map and he was basic GDI soldier and I was a stealth soldier totally cloaked he was running through the tunnel from the GDI side and I was at the other end of the tunnel and he hit myself and the guy behind me (basic soldier) and the sakura behind him with three or four quick bursts of his machine gun and all were dead? From opposite ends of the tunnel

some sort of skin to be able to see me cloaked, not a big issue really as most people have skins and I aint too fussed about that. But to get instant kills like he kept doing over and over again to all these people of various skill levels and especially to some of the best snipers I know?? Now if you think that I am trying to make myself sound l33t then you are wrong, I am good, very good, but I know much better players and if playing a game for basically 12 weeks solid like I have over the

playing it for that long. To me, Renegade is the most fun I have ever had on computer games and

the way they have.

I have played all the others before but not keep me hooked like this, the more you play the better you get, same for everything so hopefully you will realise by now that I am not a n00b and maybe

about or by dismissing what I am saying and just keep an eye out for this.

Thank you.
Pip

Aprime
,making an aimbot would mean totally changing the game's source code, which means, MP version conflicting

Not necessarily. OGC (the CS aimbot) works by hooking into the OpenGL renderer DLL and doing it's business there. It doesn't alter or modify any of the   files, so there's no version mismatch (even on a CRC check). I'm not saying there is one, just that it's potentially possible.

I have to agree with Crimson though - apart from sniping (which is a very small part of the game) what's the point? Sure, you can stand somewhere and get 100 kills against infantry, but a tank/APC will just hand you your arse on a plate. So while you're racking up your kills, your base will be going bye bye.

Working multiplayer aimbots don't exist, the person would get version mismatches everywhere UNLESS you think the clickbot is an aimbot too.

The person LOLOLOLOLOLOLOLOL is some low life ugly figure sitting the summer behind his computer trying to practise with his lame clickbot.

Yeah, I forgot to mention that bit

I've seen numerous rumours that the new OGC works with Renegade, but the lack of OpenGL (or any external rendering DLLs) makes this useless.

Subject: Aimbot 4 REAL!!
Posted by Dante on Fri, 11 Jul 2003 09:04:18 GMT

sadly... you all are clueless on this topic

it is possible, and i will NOT let out how it is done, but simple windows api programming will do the trick... seems WS didn't bother covering up every corner.

with all this talk, i decided... hell, lets see if it is even remotely possible to pull this talk off.

after about 20 minutes of easy programming, and 1 search on google for a "key" function, i had a semi-working aimbot.

now, thats 20 minutes, with about 3-4 hours, and say... some simple logic programming, i could have made serious death to anything in my reticle, tracked them, and then kept killing them.

so to all that think "hooking the opengl..." "just hook the window..." "Renegade blocks all this..." "well, its not really like that, you have to edit source code..." you are wrong.

im sorry to let you guys know this, but im not the only brain in the world that could easily find out how to do this, and im sorry to say, there is no custom skins, no bs textures, just standard Renegade, a small program, and a mouse. that is all it requires to have an aimbot in Renegade.

now, am i saying... "first one to get it rules the world?" no, i am simply implying that calling all these people idiots because it isn't possible should simply cease, but should NOT be the first

---

resort to accuse of AIMBot... there are good players, there are elite players, there are cheaters... plain and simple.

~Dante

Ah well, time to use a can of 'kick ass'

Subject: Aimbot 4 REAL!!
Posted by Dante on Fri, 11 Jul 2003 09:11:32 GMT
View Forum Message <> Reply to Message

#1. DONOT IM, PM, EMAIL me for this application, i will not give it to you. and will most likely spam your name across the community for being a potential cheater.
#2. DONOT IM, PM, EMAIL me to ask how i did it, for a screenshot, or anything related to what or how it works. i will do the same above in most cases.
#3. Refer to #1 and #2

this is serious, and i am terribly sorry to bring this public, but it must be known to everyone that it is possible. i suggest possibly moderating your servers a bit closer, but don't kick the elite player, only kick the cheaters & record there names (only AFTER you can confirm this somehow)

clues people are using an aimbot...

#1. good skill, low rank; these guys are brand new people, but play like they have played since the day they where born.
#2. play one game, never see the nick again, although they owned the entire team, and got over 100 kills on a non sniper 36 player server with good players on it.
#3. engineers everywhere... engineer is a versatile character, in the hands of an aimbot or even a clickbot, the engineer is one of the most lethal.

just some comments...

Nobody ever said an aimbot is not possible, simply that a fully working one for renegade does not exist. Many people are using the deathadder clickbot and the OGCbot (also a clickbot). They don't even try to hide the fact anymore as they release screenshots that show they are using infantry skins with blue or purple heads.

I find snipers (even cheating clickbot-using ones) to be nothing more than a mild annoyance in normal games. Of course in a sniper-only server a clickbot user can wreak some havoc (no pun intended), but as I have pointed out many many times, Renegade is not about sniping. Even if you had an "anything-I-look-at-instantly-dies" bot, you might get a lot of kills but your team will most probably still lose unless they actually have their shit together.

An aimbot isn't going to stop the APC full of techs headed to your base, and aimbot isnt going to disarm that beacon on your pedestal, an aimbot isn't going to protect you from that stealth tank running you over.

If you want to be a pussy, use an aimbot.
If you don't want to be a team player and brag about getting 100 kills of basic infantry, use an aimbot.
If you want to get bored of Renegade really fast, use an aimbot.

As I said if worst comes to worst, I can and will create a punk-buster type client/server application that will disallow all skins and fingerprinted programs in memory.

Don't fear the aimbotters...just laugh at them for they are weak.

after about 20 minutes of easy programming, and 1 search on google for a "key" function, i had a semi-working aimbot.

now, thats 20 minutes, with about 3-4 hours, and say... some simple logic programming, i could have made serious death to anything in my reticle, tracked them, and then kept killing them.

so to all that think "hooking the opengl..." "just hook the window..." "Renegade blocks all this..." "well, its not really like that, you have to edit source code..." you are wrong.

im sorry to let you guys know this, but im not the only brain in the world that could easily find out how to do this, and im sorry to say, there is no custom skins, no bs textures, just standard Renegade, a small program, and a mouse. that is all it requires to have an aimbot in Renegade.

now, am i saying... "first one to get it rules the world?" no, i am simply implying that calling all these people idiots because it isn't possible should simply cease, but should NOT be the first resort to accuse of AIMBot... there are good players, there are elite players, there are cheaters... plain and simple.

~Dante

WAY TO GO DANTE!!!! Maybe now people will start to listen and work to fix this problem! And yes Blazer, I DO REMEMBER YOU SAYING IT WASN"T POSSIBLE, I THINK THE WORDS included something to the effect anyone that says a aimbot exists is a n00b. You had many followers standing by your side talking out of all your asses ripping on people that didn't share your intellectually chalanged opinions.

Under other names I have tried MANY BOTS, some work poorly and a good sniper can do better even on a bad day, BUT THERE ARE SOME EXCEPTIONAL ONES. It was a lot of searching news groups to find them and
it takes a lot of effort to get them set up and pointing to the right files since I'm just not that well versed in reading the manuals since they are in German.

Why was I concerned about this? Just like Death Adder (made the bot for CS), he did it to bring awareness to the community. If there is awareness that IT IS A REAL POSSIBILITY, then perhaps people would work on the means to stop them. Because until it happens, you'll see more of what I've been able to do with various names in testing, pop in a server and get super high scores with no effort. I would like to play in servers that I KNOW ARE CHEAT FREE.

Oh and I have been in AOW games. True I can't hurt a tank or apc, but OH CAN I HURT THOSE

TRYING TO FIX THEM OR AS PEOPLE RUN TO GET IN THEM. This is a problem that plagues more than just sniper servers.

One major drawback that I have seen, although they do work in laddered servers, at times the program will become unstable and boot you out of Renegade. You then have to wait for WOL to release your name before you can log back in.

Like Dante said, DON'T EVEN THINK ABOUT ASKING ME FOR IT, HELL WILL FREEZE OVER BEFORE I GIVE IT OUT. I'm fed up with a lot of the so called "LEADERS" of the community. All but a couple have belittled people at every mention of an aimbot and any comment that differed from their own. I WILL NOT HELP YOU. If it wasn't for the majority of the people out there being good and fun to play with, I'd post the info I found to every site I could find. I don't need to prove that I have one. I don't need it in a game, but if I want to rape the players in the game, I can really do it with out hardly trying. Why don't you prove I don't have one, or that it's not possible. Like Dante said, he made one with out putting a ot of effort into it. I just found one that already existed, just in German though.

I'm not about to give it to people with no integrity and will use it just to win. TRY PRACTICE FOR THAT! What is the difference in me using the bot or not using it? I average 20-35 kills without bot, with bot I average 80-100 kills, and this can be done in a 30 min game sniper or AOW.

oh, don't plan on me coming to your ded servers. I will not make myself a target to packet attacks by giving you my IP, so don't even waste yours or my time by inviting me.

As I said, I have many names and go in and get out. And I stay away from servers that run BR so there is no constant log running.

See you :twisted:

Argus, I have never ever said an aimbot was impossible to make. I simply said that a 100% working aimbot for Renegade does not exist. And I still stand by that claim. You can spout off about all the clickbots that your google search turned up all you want, but you still won't succeed in your goal of scaring everyone away from playing Renegade.

I think its pretty pathetic that you did a google search and downloaded some clickbot, and then proceed to say that "like dante, don't ask me for it...", like you have something special. Good job making yourself look like an ass.

Oh and...

See you :twisted:

ALL servers have a constant log. It's not BR that makes the log, its Renegade itself. So ANY server you join your IP is logged to the renlog.txt. Too bad you can't play via a UDP proxy, so you can be a coward and hide like you did posting here via a proxy. You sir, are a joke. Grow some balls and state your opinion without hiding. FFS we are just talking about aimbots here, not drugs or anything illegal.

Bullshit. If that's the case, then why release it to the public? Take screenshota, make a video to prove your point. Releasing it only has one effect - to cause disruption. There are no altruistic motives.

There is another way that needs no major program, most of them can be dl for free if you know

or a clickbot and only need to know how to edit a single file.
 I saw my girlfriend using it on halflife (not the online versions but the single player game) And then I remembered some of the threads on these forums, and how it was almost impossible to make an aimbot.
And it took me only a few seconds to figure it out. I had seen it a hundred times and not realized it was there.
It was sad really.
 It took only 10 minutes to get it working on my machine. All I had to do was edit a single file.

---

this would have a big advantage over any one else.
I would post a screeny, but it gives it all away.
I have always prided my self as being able to contribute to my side even though I am at a major disadvantage, using what ever skill and movement I have at the time. But with this I found it easy to aim, and shoot.

A level playing feild for some, a big advantage for others.

THANK YOU

FFS people, what is so hard to grasp about the concept that a program will home in on a color? I've had a working one myself, and it was a good long time ago. Back when WSE first released the death adder program, people said it was junk, but people did not realize that they needed coustomized skins. Me and a friend tried it out, and he made us some pink skins, and behold, it worked. This was back in October. And I just cant help but want to reach out and slap these people who just keep thinking that it is not possable.

They are out there, but dont go calling everybody a aimbotter just because of that, I mean, ask for a screen shot first.

I am too tired to write on, but you get the idea

Okay, I am convinced an aimbot exists... somewhere. But isn't there a way to stop it? Renegade will fall if there is no way to stop this...

"OK I guess this must full of either N00bs or americans then, either way both dumbasses who need help wiping there own arses..."

Ok dipshit, that was the MOST childish thing I've EVER HEARD. "must be full of americans."

I have only three words for you my friend,

Go fuck yourself
